News Release

Maintenance to E. Chestnut Booster Station will reduce pressure

Residents east of the Walnut River can expect lower pressures on Thursday

ARKANSAS CITY, Kan. (July 31, 2019) — Arkansas City residents east of the Walnut River can expect reductions in pressure for at least a couple of hours Thursday due to water system maintenance.

The water pressure reduction is due to needed maintenance at the East Chestnut Booster Station, which pumps water across the East Chestnut Avenue bridge to customers in the eastern part of town.

Lower pressures could continue through the day. Further updates will be provided as necessary.

"We apologize for any inconvenience this necessary maintenance might cause," said Environmental Services Superintendent Rod Philo.
